Dear All

Report Bolillo

Sunday 11 November 2018, during feeding 07:30 - 08:30:

Bolillo did not come to the bonding enclosures. OJ & Iron were fed and secured. The Emoya team and security located Bolillo ±30 meters in the bush. Although he was sternal and reactive to our calls, he did not approach the fence, which was unusual. A drone was used to obtain footage.

We contacted Dr Caldwell and Old Chapel Clinic. Dr Caldwell was not available for a call out. We contacted Dr Stuart McKernan. Dr McKernan could only be at Emoya at 16:00 the afternoon.

Bolillo was monitored and reports were send every 30 minutes regarding any movement. Although he got up frequently to drink water it was clear that he was not feeling well.

Bolillo was sedated late the afternoon:

- Normal breathing
- No fever
- He had two small lacerations which was not treated
- He was treated with cortisone, anti-biotics, a vitamin cocktail and fluids
- Blood was taken for assessment and results will be send asap
- Bolillo is contained in a smaller bonding enclosure for observation purposes
- Bolillo was checked every 30 minutes from 18:00 to 24:00 and thereafter every hour

12 & 13 November 2018:

- Bolillo is confined in a bonding enclosure
- He responds to vehicles and caretakers
- He has a good appetite
- He moves around with ease but has a slight limp with his left hind leg
- He is still being monitored

Conclusion:

There is no apparent diagnoses currently.

Kind regards
